SUMMARY OF THE INVENTION

It is an object of the invention to provide a multilayer record carrier which is provided with control information.

**Page 4, in the paragraph beginning on line 14, change as follows:**

BRIEF DESCRIPTION OF THE DRAWING

These and other aspects of the invention will be apparent from and elucidated with reference to the embodiment described hereinafter in conjunction with the drawings, in which:.

DESCRIPTION OF THE PREFERRED EMBODIMENTS

Fig. 1 shows a disc-shaped record carrier 1. The elevational view shows one of the information layers of the record carrier, with an information area 2 bounded by a circular inner edge 3 and a circular outer edge 4. The information can be stored in, for example circular or spiral tracks in the information layer, in which the information is sequentially ordered from the inner edge to the outer edge of the information area, or conversely. The information may be divided, for example into sectors in which the ordinal number of the sectors increases from the inner edge to the outer edge.
